

people close to the box may be electrocuted if they pick up the phone. But, the Blotto Box can be stopped by merely cutting of the line or generator. If they are cut off then nothing will emit any longer. It will take a while for the box to calm back down again, but that is merely a superficial aftereffect. Once again: Construction and use of this box is not advised! The Blotto Box will continue as long as there is electricity to continue with. OK, that is what it does, now, here are some interesting things for you to do with it...

#### *Blotto Functions/Installing*

Once you have installed your Blotto, there is no turning back. The following are the instructions for construction and use of this box. Please read and heed all warnings in the above section before you attempt to construct this box.

#### Materials:

- A Honda portable generator or a main power outlet like in a stadium or some such place.
- 400 volt rated coupler that splices a female plug into a phone line jack.
- A meter of voltage to attach to the box itself.
- A green base (i.e. one of the nice boxes about 3' by 4' that you see around in your neighborhood. They are the main switch boards and would be a more effective line to start with or a regular phone jack (not your own, and not in your area code!)
- A soldering iron and much solder.
- A remote control or long wooden pole.

Now. You must have guessed the construction from that. If not, here goes, I will explain in detail. Take the Honda Portable Generator and all of the other listed equipment and go out and hunt for a green base. Make sure it is one on the ground or hanging at head level from a pole, not the huge ones at the top of telephone poles. Open it up with anything convenient, if you are too feeble then fuck, don't try this. Take a look inside... you are hunting for color-coordinating lines of green and red. Now, take out your radio shack cord and rip the meter thing off. Replace it with the voltage meter about. A good level to set the voltage to is about 1000 volts. Now, attach the voltage meter to the cord and set the limit for one thousand. Plug the other end of the cord into the generator. Take the phone jack and splice the jack part off. Open it up and match the red and green wires with the other red and green wires.

NOTE: If you just had the generator on and have done this in the correct order, you will be a crispy critter. Keep the generator off until you plan to start it up. Now, solder those lines together carefully. Wrap duck tape or insulation tape around all of the wires. Now, place the remote control right on to the startup of the generator. If you have the long pole, make sure it is very long and stand back as far away as you can get and reach the pole over.

NOTICE: If you are going right along with this without reading the file first, you still realize now that your area code is about to become null! Then, getting back, twitch the pole/remote control and run for your damn life. Anywhere, just get away from it. It will be generating so much electricity that if you stand to close you will kill yourself. The generator will smoke, etc. but will not stop. You are now killing your area code, because all of that energy is spreading through all of the phone lines around you in every direction.

Have a nice day!

#### *The Blotto Box: Aftermath*

Well, that is the plans for the most devastating and ultimately deadly box ever created. My hat goes off to: King Blotto (for the original idea).

## **44. Blowgun by The Jolly Roger**

In this article I shall attempt to explain the use and manufacture of a powerful blow -gun and making darts for the gun. The possession of the blow gun described in this article IS a felony. So be careful where you use it. I don't want to get you all busted.

#### Needed:

1. Several strands of yarn (About 2 inches a-piece).
2. A regular pencil.
3. A 2 - inch long needle (hopefully with a beaded head. If not obtainable, wrap tape around end of needle.
4. - foot pipe. (PVC or Aluminum) Half a inch in diameter.

#### Constructing the dart:

1. Carefully twist and pull the metal part (Along with eraser) of the pencil till it comes off.
2. Take Pin and start putting about 5-7 Strands of yarn on the pin. Then push them up to the top of the pin. But not over the head of the pin (or the tape).
3. Push pin through the hollow part of the head where the pencil was before.
4. That should for a nice looking dart. (see illustration)

#####  
>>>>>-----/ # is the yarn
