

the explosion that depends on how short your wick is, and, if a homemade wick is being used, its burning speed. But if you get it right... and your enemy is close enough.....BBBBBBB000000000000000000000000MMMM!

34. A different kind of Molotov Cocktail **by The Jolly Roger**

Here is how you do it:

1. Get a coke bottle & fill it with gasoline about half full.
2. Cram a piece of cloth into the neck of it nice and tight.
3. Get a chlorine tablet and stuff it in there. You are going to have to force it because the tablets are bigger than the opening of the bottle.
4. Now find a suitable victim and wing it in their direction. When it hits the pavement or any surface hard enough to break it, and the chlorine and gasoline mix..... BOOM!!!!!!

35. Phone Systems Tutorial by The Jolly Roger

To start off, we will discuss the dialing procedures for domestic as well as international dialing. We will also take a look at the telephone numbering plan.

North American Numbering Plan

In North America, the telephone numbering plan is as follows:

- 3 digit Numbering Plan Area (NPA) code , i.e., area code
- 7 digit telephone number consisting of a 3 digit Central Office (CO) code plus a 4 digit station number

These 10 digits are called the network address or destination code. It is in the format of:

Area Code	Telephone #
-----	-----
N*X	NXX-XXXX

Where: N = a digit from 2 to 9

* = the digit 0 or 1

X = a digit from 0 to 9

Area Codes

Check your telephone book or the separate listing of area codes found on many bbs's. Here are the special area codes (SAC's):

510 - TWX (USA)
610 - TWX (Canada)
700 - New Service
710 - TWX (USA)
800 - WATS
810 - TWX (USA)
900 - DIAL-IT Services
910 - TWX (USA)

The other area codes never cross state lines, therefore each state must have at least one exclusive NPA code. When a community is split by a state line, the CO numbers are often interchangeable (i.e., you can dial the same number from two different area codes).

TWX (Telex II) consists of 5 teletype-writer area codes. They are owned by Western Union. These SAC's may only be reached via other TWX machines. These run at 110 baud (last I checked! They are most likely faster now!). Besides the TWX numbers, these machines are routed to normal telephone numbers. TWX machines always respond with an answerback. For example, WU's FYI TWX # is (910) 279-5956. The answerback for this service is "WU FYI MAWA".

If you don't want to but a TWX machine, you can still send TWX messages using Easylink [800/325-4112]. However you are gonna have to hack your way onto this one!
